Zero Tolerance Policies Likely Contribute to High Attrition Rates of Black Students and Hispanic Students

by Roy L. Johnson, M.S.

Zero tolerance policies are a likely contributor to high attrition rates of Black students and Hispanic students in Texas public schools. Research shows that practices like referrals to disciplinary alternative education centers increases students’ likelihood of dropping out of school later on (U.S. Department of Education, 2016; American Psychological Association, 2008; Kang-Brown, et al., 2013). In this additional analysis to IDRA’s annual attrition study, we compared the trend lines for attrition rates to those of discipline data for the state of Texas.

IDRA’s attrition studies involve an analysis of ninth-grade enrollment figures and 12th-grade enrollment figures three years later (see story on Page 3). The high attrition rates of Black students and Hispanic students were particularly acute in the mid-1990s and are likely fueling the continued disproportionality between White students and students of color today.

The contemporary origin of zero tolerance policies traces back to the 1980s when federal and state initiatives sought ways to wage the “war on drugs” and other societal issues. With the advancement and adoption of the “Broken Windows Theory” by Kelling, Wilson & Coles in the 1980s and 1990s, school systems began to apply zero tolerance approaches to minor school infractions (Teske, 2011). The theory purports that, by addressing problems when they are small, the likelihood of the problems escalating diminishes.

During the early to mid-1990s, school systems across the country began to adopt zero tolerance policies for minor school infractions in the belief that they were heading off larger potential problems. This resulted in the near doubling of students suspended annually (Poe-Yamagata & Jones, 2000).

With the revision of the state education law in 1995, Texas enacted the modern version of the school discipline code establishing zero tolerance measures into state and school district codes of conduct and a variety of alternative school placements. In 2005, 2009 and 2015, the Texas Legislature made some efforts to mandate some level of discretion in school discipline under certain circumstances. The spike and fall in the attrition rates for all students — and particularly students of color and males — became acutely observable as shown in the IDRA attrition studies.

**Attrition Rates by Race-Ethnicity and Gender**

The historical high attrition rate for each race-ethnicity group parallels the period when zero tolerance policies gained momentum in Texas. Lower attrition rates for each group coincide with Texas’ legislative attempts to relax zero tolerance approaches under specific circumstances.

Males have higher attrition rates than females.
- Attrition rates for male students ranged from a low of 26 percent in 2013-14 to a high of 46 percent in 1996-97. Attrition rates for female students ranged from a low of 21 percent in 2013-14 to a high of 40 percent in 1996-97.
- Attrition rates for Black males ranged from a low of 29 percent in 2013-14 to a high of 55 percent in 1995-96 and 1996-97.
- For White males, attrition rates ranged from a low of 14 percent in 2013-14 to a high of 34 percent in 1995-96, 1996-97, and 1997-98.

In 2015-16, the attrition rate of Hispanic males was 2.13 times higher than White males and 1.10 times higher than Black males.

Among females, Hispanic females have higher attrition rates than Black and White female students.
- Attrition rates for Hispanic females ranged from a low of 27 percent in 2015-16 to a high of 51 percent in 1996-97.
- Attrition rates for White females ranged from a low of 12 percent in 2010-11, 2011-12, 2012-13, and 2013-14 to a high of 30 percent in 1995-96.

In 2015-16, the attrition rate of Hispanic females was 2.08 times higher than White females and 1.17 times higher than Black females.
Discipline Data by Race-Ethnicity

The Texas Education Agency collects discipline data through the Public Education Information Management System (PEIMS). Data are reported at the state, region and school district level with access readily available to annual summary reports for the last 10 years (2005-06 to 2014-15). A review of these data show disproportionately high disciplinary action rates for students of color and males.

In Texas, data are collected on four types of disciplinary actions: in-school suspension, out-of-school suspension, referral to disciplinary alternative education programs (DAEP), and referrals to juvenile justice alternative education programs (JJAEP).

In-School Suspension Data. Each year from 2005-06 to 2014-15, Black students received in-school suspensions nearly two times the rate they comprised in the total population.

- In 2014-15, Black students represented 13 percent of public school enrollment in Texas, but 25 percent of students receiving in-school suspensions.
- In comparison, White students represented 28 percent of enrollment but 14 percent of students receiving in-school suspensions. On average, 17 percent of Black students are suspended compared to 8 percent of White students.
- Hispanic students represented 52 percent of enrollment and 50 percent of students suspended. On average, 9 percent of Hispanic students received in school suspensions.
- Males represented 51 percent of the 2014-15 total enrollment but 71 percent of the students suspended in-school. On average, 12 percent of males compared to 6 percent of females received in-school suspensions.

Out-of-School Suspension Data. As with in-school suspensions, Black students received out-of-school suspensions significantly more than the rate they comprised in the total population from 2005-06 through 2014-15 school years.

- In 2014-15 Black students represented 13 percent of public school enrollment in Texas, but 35 percent of students receiving out-of-school suspensions.
- White students represented 28 percent of enrollment but 14 percent of students receiving out-of-school suspensions. On average, 11 percent of Black students are suspended compared to 2 percent of White students.
- Hispanic students represented 52 percent of enrollment and 49 percent of students receiving out-of-school suspensions. On average, 4 percent of Hispanic students received out of school suspensions.
- Males represented 51 percent of the 2014-15 total enrollment but 73 percent of the students receiving out-of-school suspensions. On average, 12 percent of males compared to 6 percent of females were suspended.

DAEP = Disciplinary Alternative Education Program  JJAEP = Juvenile Justice Alternative Education Program
Source: Texas Education Agency, State Level Annual Discipline Summary, PEIMS Discipline Data, 2007-08 to 2014-15

In 2014-15, Black students represented 13 percent of public school enrollment in Texas, but 35 percent of students receiving out-of-school suspensions. On average, 12 percent of males compared to 6 percent of females were suspended.

Other Discipline Data. Annual discipline summaries also provide information on students removed from the classrooms in several other categories including disciplinary alternative education program (DAEP), juvenile justice alternative education program (JJAEP) and expulsions. DAEPs were established for criminal offenses – drug related activities, gun violations and assault – all violations that had been punishable by referral to the Texas JJAEP system. Because not all areas of the state had access to JJAEP facilities, DAEPs were presented as a means for creating options that would remove serious offenders from regular school settings, including many small school districts and those rural communities where no JJAEP facilities existed.

Instead, students as young as six years old were removed from their kindergarten classes and sent to DAEPs for “discipline” problems. And students often can’t catch up academically because many of their teachers are not qualified to teach them, and those who are qualified are unable to coordinate with the students’ “sending” schools.

In 1999, IDRA released a report on thousands of Texas public school students who were being criminalized, ostracized and stigmatized for “offenses” that were formerly managed by a visit to the principal’s office or even a simple timeout with its seminal assessment of Texas DAEPs. Ten years later, an IDRA policy update, showed that in the previous decade, more than three quarters of a million students had been sent to DAEPs. Four out of the five students there were not there...

DAEP = Disciplinary Alternative Education Program    JJAEP = Juvenile Justice Alternative Education Program
Source: Texas Education Agency, State Level Annual Discipline Summary, PEIMS Discipline Data, 2014-15

Disciplinary Action Rates by Race-Ethnicity in Texas, 2014-15

African American students are disciplined at much higher rates than other students

because of serious offenses.

Results for the DAEP and JJAEP categories in IDRA’s 2016 review are provided in the tables and graphs on Pages 18-19. In each of these categories Black students and males were disproportionately represented.

Conclusions

Zero tolerance policies are contributing to the high number and percent of students who are lost from public school enrollment, particularly students of color and males. High attrition rates coincide with the adoption of zero tolerance policies in the state of Texas in the early to mid-1990s and likely are contributing factors today. The research points to suspension as one of the biggest signs that a student may drop out.

Emerging research on zero tolerance and the positions of professionals in other related fields and the judicial field question the effective of zero tolerance policies in maintaining a safe and disciplined school learning environment. There is no research to support that zero tolerance makes schools any safer. While zero tolerance was ostensibly created to respond to issues where students are at risk of harm, only 5 percent of disciplinary actions in recent years involved the possession of a weapon. Violent crime in juvenile populations is down, but it was already decreasing since 1991 (Kang-Brown et al., 2013).

What is indeed clear is the mounting amount of data on the disproportionality of discipline actions in schools. For example, as the Office for Civil Rights’ research shows, preschool students face a disproportionately high rate of suspension. According to the data, “Young children who are expelled or suspended are as much as 10 times more likely to drop out of high school, experience academic failure and grade retention, hold negative school attitudes, and face incarceration than those who are not” (U.S. Department of Health and Human Services & U.S. Department of Education, 2014).

And nationally, Black students are 3.8 times as likely to be subject to out-of-school suspension as white students. And they are 2.3 times as likely to be referred to law enforcement or subject to a school-related arrest than white students (U.S. Department of Education, 2016).

Through the Civil Rights Data Collection (CRDC), the U.S. Department of Education, Office for Civil Rights, is monitoring data on discipline in schools due to the overrepresentation of students of color in suspensions and expulsions. Expulsions and suspensions are in violation of civil rights laws if they are found to be administered in such a way that targets minority students.

School systems and policymakers in Texas and the nation must ensure that the necessary reforms and actions be taken to provide equal education opportunity for every child in Texas regardless of race, color and gender. A number of reports and resources are available to assist stakeholders in public education in working toward sustainable changes that will reduce bias and help all students learn. See IDRA’s eBook, Resources on Student Discipline Policy and Practice (http://budurl.com/IDRAeBDLP).
